U.S. DEPARTMENT OF
ENERGY

Portsmouth / Paducah Gaseous Diffusion Plants

- **Portsmouth Plant**

- **History**

- Built in 1952-1956 to enrich uranium for the nation's nuclear weapons program and later for commercial nuclear reactors
- Production ceased 2001; currently in Cold Shutdown prior to future Decontamination & Decommissioning (D&D)

- **Location**

- South central Ohio, approximately 75 miles south of Columbus and 22 miles north of the Ohio River

- **Acreage**

- DOE reservation is 3,777 acres

- **Other Missions**

- DOE leases former centrifuge facilities onsite to USEC Inc. for deployment of American Centrifuge Plant

U.S. DEPARTMENT OF
ENERGY

Portsmouth / Paducah Gaseous Diffusion Plants

- **Paducah Plant**

- **History**

- Site was originally known as Kentucky Ordnance Works – WWII munitions plant
 - 1950, site selected by AEC for construction of uranium enrichment plant
 - Operations began 1952

- **Location**

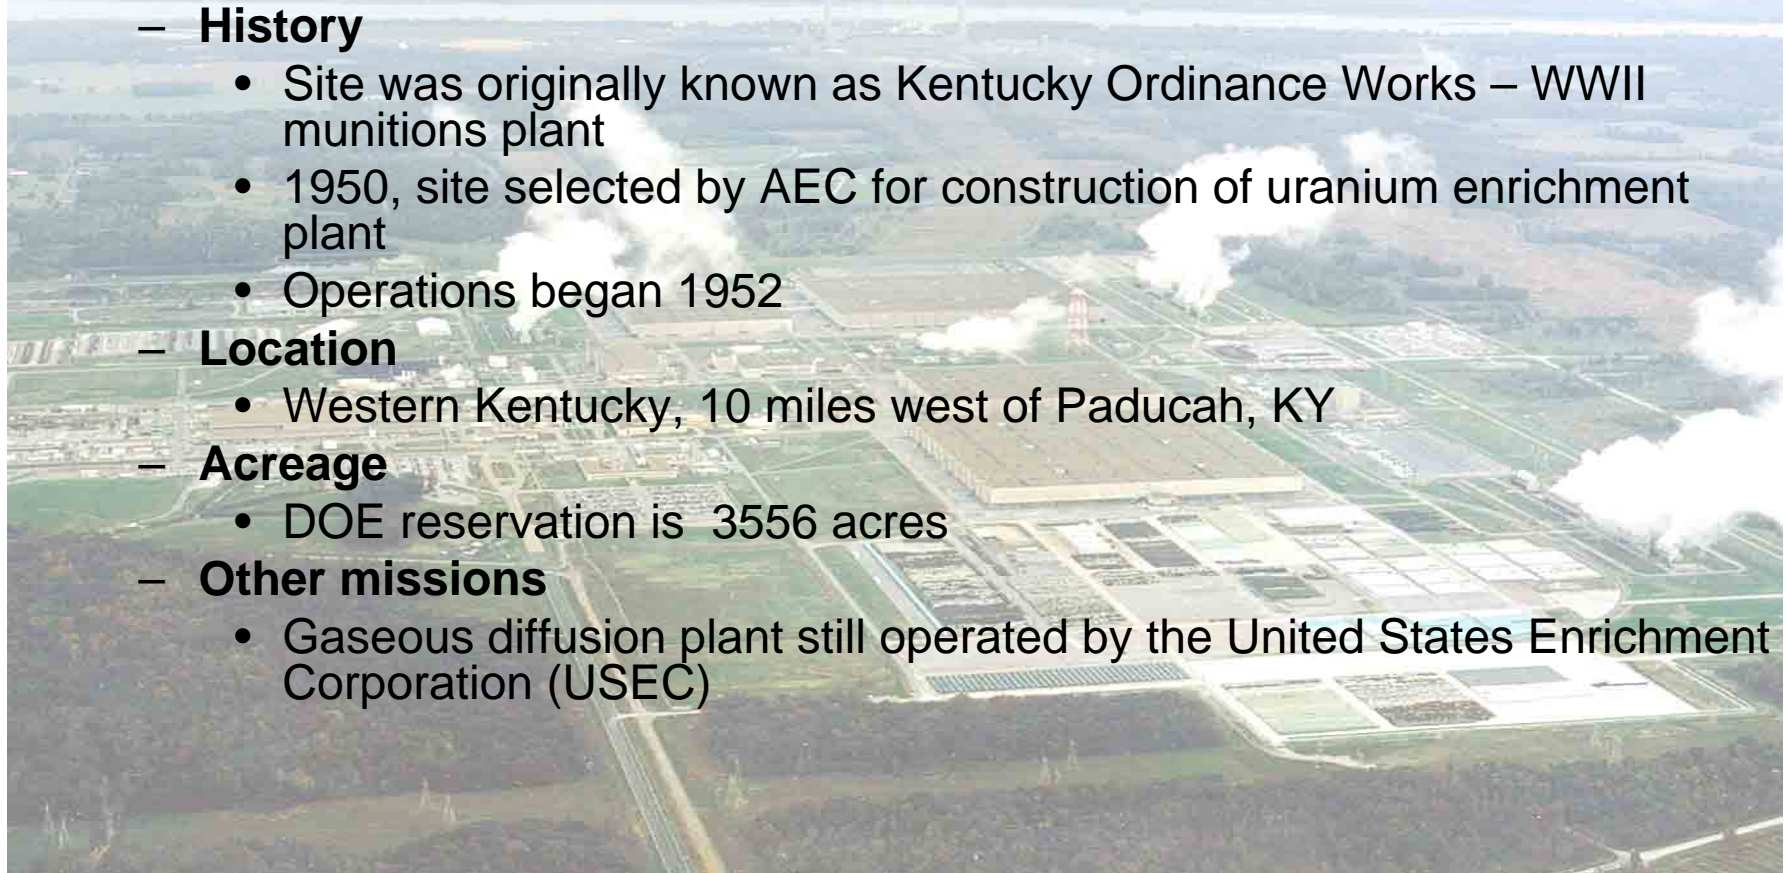

- Western Kentucky, 10 miles west of Paducah, KY

- **Acreage**

- DOE reservation is 3556 acres

- **Other missions**

- Gaseous diffusion plant still operated by the United States Enrichment Corporation (USEC)

PPPO D&D Statistics

	Portsmouth	Paducah (Still in operation)
Number of buildings	134	419
Total Square footage	~10.6M More than 1.5 Pentagons	~8.6M Triple the US Capitol
Groundwater , Deferred units	5 groundwater plumes under treatment. 41 Units to defer further investigation until plant D&D.	Deferred Units include remediation of the soils under and around the site buildings after D&D.
Other	Facility D&D is expected to generate more than 1.7M m ³ of waste.	D&D activities include S&M, and post-decision operations.

U.S. DEPARTMENT OF
ENERGY

Challenges Ahead

- Evaluating D&D waste disposition alternatives
- Assessing potential for recycling and reutilization of equipment, metals, concrete debris
- Determining future end use for the site
- Develop a cost effective strategy for the return of groundwater to beneficial use

EM *Environmental Management*

safety ❖ performance ❖ cleanup ❖ closure

U.S. DEPARTMENT OF
ENERGY

Previous US D&D Efforts

- Oak Ridge – East Tennessee Technology Park
 - Sister plant to Portsmouth and Paducah
 - Similar issues with waste disposal
 - Similar D&D regulatory environment
- Portsmouth Building X-770
 - Model for the larger process buildings on site
 - Serves as an example for D&D and waste disposition

EM *Environmental Management*

safety ❖ performance ❖ cleanup ❖ closure

www.em.doe.gov

U.S. DEPARTMENT OF
ENERGY

Previous International D&D efforts

- Capenhurst GDP – UK
 - Smaller than US GDP's
 - Similar processes and hazards
 - D&D Completed 2008
- Pierrelatte GDP – France
 - Multiple large facilities in one location
 - Four separate processing facilities
 - D&D completed

EM *Environmental Management*

safety ❖ performance ❖ cleanup ❖ closure

www.em.doe.gov

U.S. DEPARTMENT OF

ENERGY

Site D&D Similarities

- Pre D&D efforts
 - Conduct Ur deposit removal prior to D&D
 - Reduces criticality concerns
 - Reduces possible worker exposure
 - Processing of hazardous materials
 - PCB oils removed and incinerated
 - Freon removal and treatment

EM *Environmental Management*

safety ❖ performance ❖ cleanup ❖ closure

www.em.doe.gov

U.S. DEPARTMENT OF
ENERGY

Site D&D Similarities

- D&D processes
 - Waste minimization
 - Volume / size reduction
 - Segregation of contaminated and non-contaminated
 - Decontamination processes
 - Mechanical
 - Chemical

EM *Environmental Management*

safety ❖ performance ❖ cleanup ❖ closure

www.em.doe.gov

U.S. DEPARTMENT OF
ENERGY

Site D&D Differences

- Recycle of radiologically impacted metals
 - Capenhurst
 - UK established “free release” thresholds
 - Decontaminated and recycled 94% of metals
 - Pierrelatte
 - French regulations restricted recycle of materials that were ever exposed to radioactive contaminants
 - Recycle / reuse of materials was not a barometer of success

EM *Environmental Management*

safety ❖ performance ❖ cleanup ❖ closure

www.em.doe.gov

U.S. DEPARTMENT OF
ENERGY

Site D&D Differences

- Recycle of radiologically impacted metals
 - January 2000 Moratorium
 - NRC has indefinitely deferred establishing limits
 - DoE policy on recycled metal remains in place
 - Portsmouth / Paducah
 - Large volume of metal from D&D could be recycled to meet IAEA exemption limits for commercial re-use

EM *Environmental Management*

safety ❖ performance ❖ cleanup ❖ closure

U.S. DEPARTMENT OF
ENERGY

Common Lessons Learned

- Advantages of detailed early planning
 - Greatest opportunity for cost savings
 - Achieve stakeholder buy in
 - Improves communication with outside entities
 - Contractors
 - Labor
 - Waste disposal sites

EM *Environmental Management*

safety ❖ performance ❖ cleanup ❖ closure

www.em.doe.gov

U.S. DEPARTMENT OF
ENERGY

Common Lessons Learned

- Continuous monitoring of nuclear material
 - Early measurement and inventory of hold-ups
 - Pre D&D deposit removal
 - Monitor movement of Uranium inventory
 - Enhanced Criticality controls
 - Limit worker exposure
 - Opportunity to share Lessons Learned with international community

EM *Environmental Management*

safety ❖ performance ❖ cleanup ❖ closure

www.em.doe.gov

U.S. DEPARTMENT OF
ENERGY

Common Challenges

- Material and Waste disposition decisions
 - Can be single highest expense
 - Greatest source of delay
- Workforce management
 - Adapting for a different skill mix
 - Motivating workforce in a closure environment
- Future site use
 - Reindustrialization or preserve

EM *Environmental Management*

safety ❖ performance ❖ cleanup ❖ closure

www.em.doe.gov

U.S. DEPARTMENT OF
ENERGY

Sharing Lessons Learned

- Continue to employ successful past practices to meet challenges
- Share lessons learned from PPPO with international community through IAEA/IDM
