ENERGY

NNSA INFRASTRUCTURE CHALLENGES

Jim McConnell
Associate Administrator for
Safety, Infrastructure and Operations

March 2017

NNSA SAFETY, INFRASTRUCTURE & OPERATIONS

A VAST AND COMPLEX ENTERPRISE

THE CHALLENGE: AGING & DECLINING INFRASTRUCTURE

AGE OF FACILITIES

EXCESS FACILITIES

CONDITION OF FACILITIES

Vision

Safely operate and modernize our enterprise to meet demands now and in the future.

Mission

Maintain, Operate, and Modernize NNSA Infrastructure in a safe, secure, and cost-effective manner to enable program results.

41,000

LABORATORY & PLANT EMPLOYEES

2,000
miles of roads

NEARLY THE DRIVING DISTANCE FROM DC TO LOS ALAMOS

TRACK **400,000**
METRIC TONS OF
NUCLEAR MATERIAL
TRANSACTIONS

safety for **400**
nuclear facilities

2,160
square miles
of land area

ABOUT THE SIZE OF DELAWARE

36 Million
SQUARE FEET OF
FACILITY SPACE

(~ six Pentagons worth)

15.2 MILLION FT³
OF HAZMAT

ENOUGH TO FILL ~15
WASHINGTON MONUMENTS

9.1 Trillion BTUs
ANNUAL ENERGY CONSUMPTION

enough to power
~250,000
homes for
one year

NONPROLIFERATION

EMERGENCY RESPONSE

OTHER DOE PROGRAMS

Office of Safety, Infrastructure, and Operations

NAVAL REACTORS

INTERAGENCY: DoD, DHS, DNI

DEFENSE PROGRAMS

Challenges

- NNSA's infrastructure is too big, too old and too brittle
- Failures are increasing in frequency, severity and unpredictability
- Infrastructure risks become safety and program risks

Strategic Objectives

- Build an operating model that is repeatable, predictable, transparent, effective, and efficient
- Arrest the declining state of NNSA infrastructure by using innovative tools
- Enhancing infrastructure strategic planning
- Manage risks in a holistic, enterprise-wide approach

Progress

- Created new, data-driven, risk-informed management tools
- Established Master Asset Planning process
- Increased Maintenance/Recapitalization funding and begun to achieve improvements

INFRASTRUCTURE CHALLENGES

- Risk and inefficiency posed by poor condition of operating and excess facilities
- Failures are increasing in frequency, severity and unpredictability
 - PX: High Pressure Fire Loop (HPFL) failure (July 2016)
 - LANL: Diesel Engine for Fire Water Pump failure at PF-4 (August 2016)
 - Y-12: Kathabar dehumidification unit in Beta-2 taken out of service due to failed exhaust duct clamp (September 2016)
- Infrastructure risk becomes safety & program risk

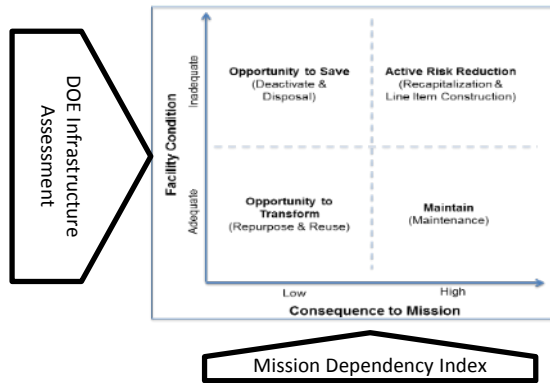

LANL Diesel Engine Failure

Y-12 Kathabar System Failure

NNSA infrastructure is too big, too old & too brittle

Enterprise Risk Management

Correlates consequence with probability; facilitates data-driven, risk-informed infrastructure investment decisions

Mission Dependency Index

Measures “consequence;” combines the impact to mission if the asset were lost, the difficulty to replace the asset & interdependency of assets to calculate a score from one to 100

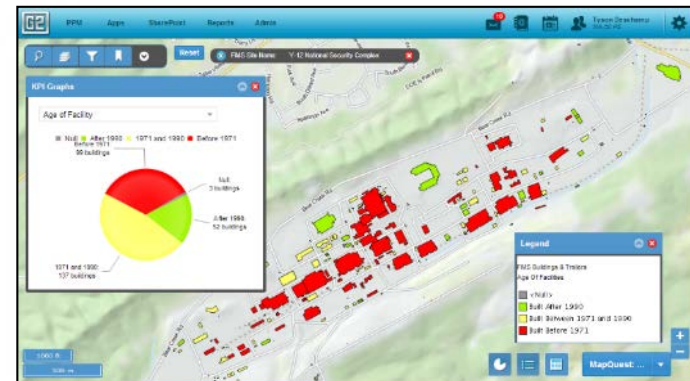

BUILDER

Sample Failure Curve

Measures “probability;” knowledge based condition assessment tool that can compare inspection data against known failure curves to predict system wear & identify the optimal time to invest

G2

Award-winning program management system captures & analyzes key data in a holistic manner

- The BUILDER Sustainment Management System (SMS) is a web-based software application developed by the U.S. Army Corps of Engineers (USACE), Engineer Research and Development-Construction Engineering Research Laboratory (ERDC-CERL) to help make critical asset management decisions and provide investment guidance to:
 - **Objectively** assess infrastructure across the enterprise
 - **Consistently** analyze investment requirements and prioritize scarce resources
 - **Track** investments to ensure key stakeholder requirements are addressed
 - **Forecast** the investment requirements for budget defense and course of action analysis
- BUILDER is a government-owned product that is also available commercially that focuses on life-cycle infrastructure management and introduces the concept of performing Knowledge-based condition assessments.

- G2 is used by a number of NNSA organizations to manage over \$2B annually
- G2 is a custom-developed system designed to integrate and manage data at the NNSA Enterprise/Program level
 - Provides electronic change control, business rules and automatic notifications
 - Geo spatial data for maps, diagrams, photos, inventories and condition
 - Implements Enterprise Risk Management for prioritizing and analyzing investments
- G2 can electronically transfer data to/from existing project level systems (e.g. MS Project, Primavera P6, Oracle, SAP, etc.) to increase data sharing with minimal effort
- Encrypted access control with internal permissions and disaster recovery (UCNI, OOU and C-FGI-MOD)
- Includes mobile phone and tablet apps

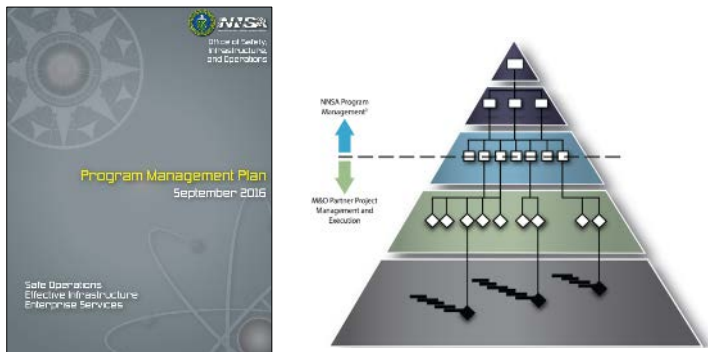

Fact Summary

- ❖ Agile development with new features released every 8 weeks
- ❖ Over 10 years of operational experience (Started in 2007)
- ❖ ~900 users across HQ, Field Offices, NNSA & non-NNSA sites
- ❖ Project Awards
 - 2010 – PMI
 - 2015 – NDIA/AFEI
- ❖ Allocation of system management functionality
 - 65% Scope
 - 15% Schedule
 - 20% Financial/Budget

- The MAP is an enterprise-integrated, risk-informed, long-range infrastructure plan
- MAP uses G2 capabilities to analyze key data, visualize the interconnectivity of facilities, and evaluate mission requirements and our infrastructure's ability to support them
- The MAP process will provide several benefits:
 - A framework to align near-term decisions with long-term vision by linking planning outputs to programming and budgeting inputs
 - Identify the implications of mission requirement to ensure infrastructure readiness
- Completion of 1st MAP scheduled for end of March 2017

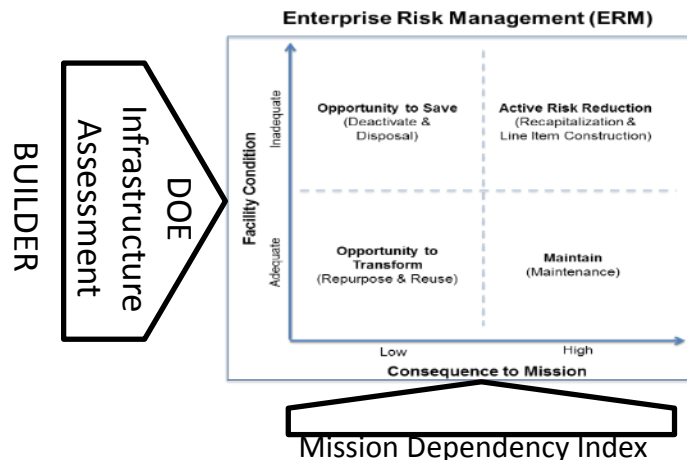

Program Management Plan

Defines program management requirements; including risk-based approach to creating IPL

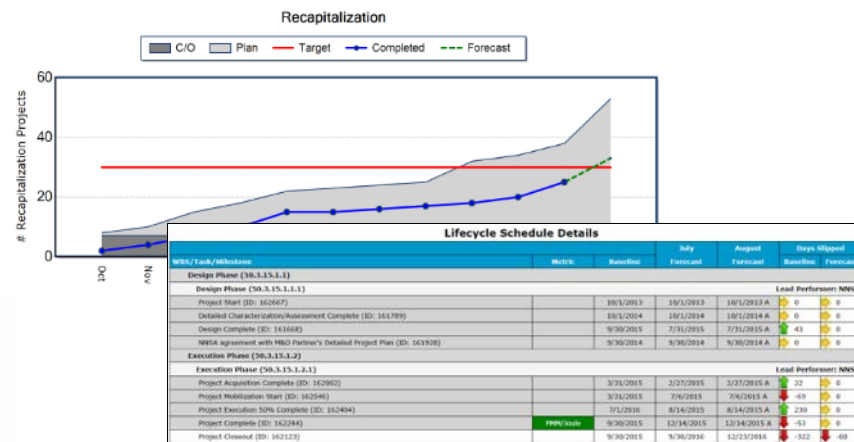

Enterprise Risk Management

Integrated Priorities List (IPL)

Pr. Rank	Site	Project	Est. Start	Est. Completion	Funded Year	2017	2018	2019	2020
1	PX	Flame Detection Installation, Building 12-64 Boys 1B & 20	2015	2017	2017	\$1,500.00K			
2	Y-12	Utility and Power Pole Replacement-Phase 2	2017	2017	2017	\$2,000.00K			
3	LANL	Non Reactor Classified Machine Shops Electrical Maintenance and Repair	2017	2018	2017	\$400.00K			
4	LLNL	HED Physics Precision Target Micromachining Consolidation	2017	2019	2017	\$1,650.00K			
5	SRS	Replace Obsolete Oxygen Monitors (L2)	2017	2018	2017	\$1,325.00K			
6	Y-12	Building 9204-2E Elevator #1 Replacement	2017	2017	2017	\$1,000.00K			
7	LANL	Safety and Compliance Upgrades at TA-55	2017	2018	2017	\$2,500.00K			
8	LLNL	Safety renovation of 4 High level laboratories in B151	2017	2017	2017	\$3,750.00K			
9	PX	Flame/RANS Fiber Network	2015	2017	2017	\$13,700.00K			
10	PX	FS-10 Electrical Upgrade	2017	2018	2017	\$800.00K			
11	LANL	Redundant Fire Detection in Tritium Process Areas	2017	2018	2017	\$2,000.00K			
12	LANL	Ventilation Evaluation Based on TA-55 Active Confinement Ventilation Phase I	2017	2019	2017	\$2,600.00K			
13	SRL	HR-17 (Primary Standards Laboratory) Refurbishments	2016	2017	2017	\$6,500.00K			
14	Y-12	Building 9215 Wet Pipe System 2 50 Year Sprinkler Head Replacement	2017	2017	2018		\$6,500.00K		
15	PX	Bay/Cell Safety Improvements, Building 12-104 B9, B11, B13, & B15	2017	2018	2018		\$13,100.00K		
16	SRS	Replace Obsolete Oxygen Monitors (L4)	2017	2018	2017	\$1,325.00K			
17	LLNL	HR-17 Flame Hood Exhaust (HR-17) Ventilation System Recapitalization	2017	2017	2018		\$3,800.00K		
18	SRL	Replace Domestic Water and Fire Protection Lines, TA-1	2017	2018	2018		\$2,225.00K		
19	LLNL	Superblock Electrical Building System Revitalization	2017	2019	2018		\$3,500.00K		

Performance Metrics

Maintenance

Recapitalization

Includes \$200M in FY 2017 for Bannister

Construction

Total

Before

After

Y-12 Bldg. 9204-2 Oven Room Ceiling Repair

Pantex Bay/Cell and Lead In/Flame Detection System

NNSS Lead In Line Replacements

SNL Tonopah Main Distribution Hub

Before

After

LANL Casa 3 Demolition

SRS Fire Suppression Modifications

LLNL B131 Chiller Replacement

We have challenges

- NNSA's infrastructure is too big, too old and too brittle
- Failures are increasing in frequency, severity and unpredictability
- Infrastructure risks become safety and program risks

Our Strategic Objectives focus on those challenges

- Building an operating model that is repeatable, predictable, transparent, effective, and efficient
- Arresting the declining state of NNSA infrastructure by using innovative tools
- Enhancing infrastructure strategic planning
- Modernize NNSA facilities/equipment and halt the growth of Deferred Maintenance

We are making progress

- Using new, data-driven, risk-informed management tools
- Producing first Master Asset Plan end of March
- Increased Maintenance/Recapitalization funding and begun to achieve improvements
